Subject: RE: Lower Ley Creek sampling

Thanks Pam. I would like, on behalf of the group, a chance to talk over your message and related issues. Are you available any time through the end of the week, or early next week?

Subject: Lower Ley Creek sampling

Todd,

We have previously discussed the performance of additional sampling in the flood plain area located between the creek and the rail line for the purpose of full characterization and completeness of the upland sampling program. You had requested examples of areas where the flood plain was contaminated due to flooding and not to the sidelaying of dredge spoils. I have attached a recent example of a flood plain area located near the Town of Salina landfill. This area had been remediated and was not contaminated prior to a large storm which led to flooding and recontamination of a dirt roadway near the Creek. One can assume that this has happened several times in the past and has probably also happened numerous times in the low lying area adjacent to the rail line side of the Creek.

Please let me know your sampling schedule for this area and for other areas not fully characterized. In addition, will the PRPs release the funds for the completion of the sediment design documents while the upland soil areas are being sampled?

Also please send me the overdue monthly reports.

Thanks, Pam
